

Have you recently been diagnosed with higher-risk myelodysplastic syndrome (MDS) and been advised to receive a medication called azacitidine?

STIMULUS
MDS2

Now enrolling: the **STIMULUS-MDS2** clinical trial, a clinical research study evaluating the immuno-myeloid therapy sabatolimab in combination with azacitidine for patients with higher-risk MDS or chronic myelomonocytic leukemia-2 (CMML-2).

Participants must meet the following criteria:

- 18 years of age or older
- Diagnosed with intermediate-, high-, or very high-risk MDS or CMML-2
- Have not received prior treatment
- Have not had a prior organ or stem cell transplant
- Are not eligible for a stem cell transplant or intensive chemotherapy

If you are interested in participating and think you meet these criteria, please contact your doctor to discuss your eligibility for the **STIMULUS-MDS2** clinical trial.
